SUMMARY

Full Stack AI Developer with professional experience shipping secure, scalable web applications (React, Node.js, Express, MongoDB, AWS EC2) and a portfolio of AI products with live demos: tool-calling LLM agents, retrieval-augmented generation, AI-powered e-commerce and real-time IoT monitoring. I work across the full lifecycle, from data models and APIs to interfaces, automated tests, Docker and CI/CD. An Embedded Systems Engineering student, I bring hardware experience (ESP32, MQTT) to software products.

TECHNICAL SKILLS

AI / LLM	OpenAI tool calling, AI agents, RAG & embeddings, Ollama, prompt engineering, guardrails, scikit-learn (anomaly detection)
Frontend	React 19, TypeScript, JavaScript (ES6+), Tailwind CSS, Vite, Three.js / React Three Fiber, Recharts, responsive design
Backend	Node.js, Express, tRPC, Python, FastAPI, REST APIs, WebSockets & SSE, JWT authentication, role-based access control
Databases	PostgreSQL, MongoDB / Mongoose, MySQL, SQLAlchemy, Drizzle ORM
DevOps & testing	Docker & Compose, GitHub Actions CI/CD, AWS EC2 & S3, Nginx, PM2, Linux, Cloudflare; Pytest, Vitest, Supertest
IoT & security	ESP32, Arduino, MQTT, PlatformIO, C++, sensors; MITRE ATT&CK, Sigma rules, log analysis
SEO & performance	Technical SEO, Core Web Vitals, GA4, Search Console, caching and image optimization

EXPERIENCE

Full Stack MERN Developer — MBU Devs
Mar 2026 – Present · Remote (US)

- Develop responsive, scalable full-stack applications with React.js, Node.js, Express.js and MongoDB.
- Build secure RESTful APIs with JWT authentication and role-based access control (RBAC); integrate third-party APIs.
- Deploy and maintain applications on AWS EC2 with Docker, Nginx, PM2, Linux and Git-based deployment workflows.
- Improve speed and search visibility through performance optimization and technical SEO.

Analytics & Monitoring — Contract Bazaar
Mar 2026 – May 2026 · Lahore

- Analyzed website performance with Google Analytics 4, Search Console, log-file analysis and traffic monitoring to find and prioritize optimization opportunities.

Full Stack Developer — Digis, a Fiverr company (NYSE: FVRR)
Oct 2025 – Feb 2026 · Lahore

- Built full-stack business applications with React.js, Node.js, Express.js, MongoDB and REST APIs to solve customer workflow problems.
- Secured backend APIs with JWT and RBAC; integrated payment gateways and cloud services.
- Deployed on AWS EC2 with Docker, Nginx, Linux and CI/CD; improved performance with PageSpeed work, Cloudflare caching and technical SEO.

SELECTED PROJECTS (ALL WITH TESTS, CI AND LIVE DEMOS)

ShieldMind AI — AI copilot for SOC analysts
Live demo · Code

FastAPI, Python, React, TypeScript, SQLAlchemy, OpenAI tool calling

- Tool-calling LLM agent that triages logs, maps findings to MITRE ATT&CK, looks up CVEs, writes Sigma detection rules and drafts incident-response playbooks, streaming each step over SSE.
- Detectors for SSH brute force, password spraying, SQLi/XSS/path traversal and Windows security events; guardrails and a deterministic fallback; 26 automated tests.

ShopSense AI — AI-powered e-commerce platform Live demo · Code

React 19, Node.js, Express 5, PostgreSQL, Drizzle ORM, Vitest

- Natural-language product search (TF-IDF ranking plus parsed price and category filters) and a shopping assistant that compares products and adds them to the cart.
- AI review summaries, co-purchase recommendations, admin analytics with an AI copywriter, and atomic stock updates that prevent overselling.

Ember & Saffron — AI restaurant platform Live demo · Code

React 19, Node.js, PostgreSQL, Server-Sent Events, Recharts

- Allergen-aware menu and ordering, live reservations with Postgres advisory locks to prevent double booking, and a real-time kitchen display.
- AI concierge for dietary questions and bookings; menu-engineering matrix (Kasavana & Smith) with pricing recommendations.

EdgePulse IoT AI — predictive maintenance for embedded systems Live demo · Code

ESP32 (C++), MQTT, FastAPI, WebSockets, scikit-learn, React

- ESP32 firmware streams sensor data over MQTT; the backend flags anomalies with robust z-scores and forecasts time-to-threshold failures.
- Live WebSocket dashboard and an AI assistant that diagnoses faults and proposes device commands for user confirmation.

Also: DocuMind AI (RAG with cited answers, FastAPI, OpenAI/Ollama) · AI Engineering Copilot (multi-model chat, memory, knowledge base) · AI Resume Analyzer · HS Space (multi-model AI SaaS with RBAC) · By Salma (jewelry e-commerce) · Smart Home Automation (ESP32) · 3D portfolio (React Three Fiber)

EDUCATION

B.S. Embedded Systems Engineering — The University of Lahore Feb 2024 – 2028 (expected)

Coursework: Data Structures, Object-Oriented Programming, Database Systems, Embedded Systems, Software Engineering, Computer Networks, Digital Signal Processing.

High School Diploma — Punjab Group of Colleges

CERTIFICATIONS & LANGUAGES

Responsive Web Design · JavaScript Fundamentals · Git & GitHub · MongoDB Basics · Node.js Fundamentals · React.js Fundamentals

Languages: English, Urdu
